Git delete a file that has been added to git already
Summary

Go to the particular directory that you want to exclude from git.
Right click on it:

TortoiseGit
Delete (keep local)
Remove

2. The file/folder will still exist locally however it has been removed from git.

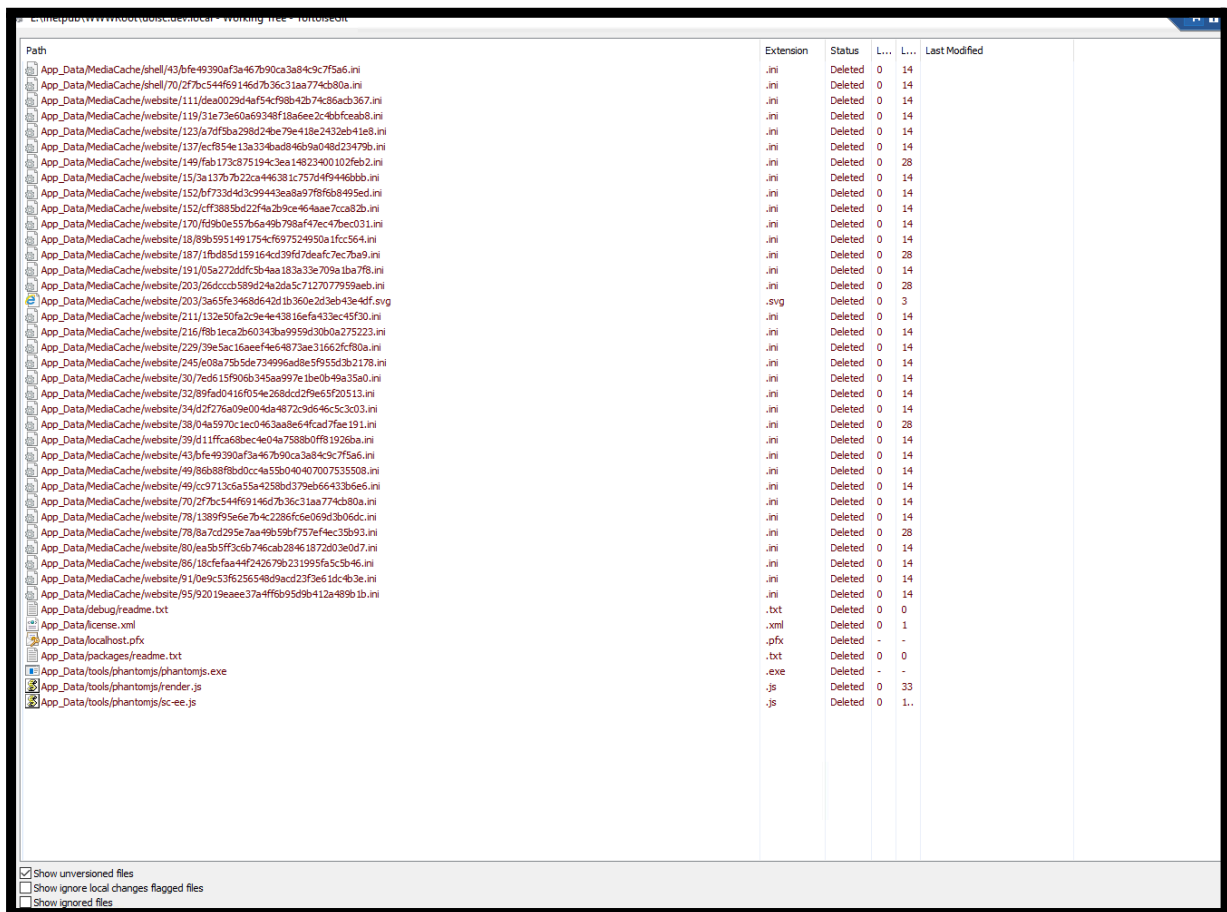

3. The next step is to right click in the folder:

– TortoiseGit;
– Check for modifications

4. You will see the below pop-up window:

5. The final step is to commit the files which have a status of Deleted.
Right click in the directory and go to Git Commit -> "master"
